Response to Amendment

The examiner is in receipt of applicant's response to Appeal decision mailed 8/22/2007, which was received 9/10/2007. Acknowledgement is made to the amendment to claims 1,3,7,9,17-20,22 and 26. Applicant's amendment has been carefully considered and the examiner has determined that a restriction is necessary, the restriction is presented below.

Original Presentation

Newly submitted claim 29-32 are directed to an invention that is independent or distinct from the inventions originally claimed for the following reasons: These claims are directed to a ordering method where there are only sample items on display for ordering online

Since applicant has received an action on the merits for the originally presented invention, this invention has been constructively elected by original presentation for prosecution on the merits. Accordingly, claims 29-32 are withdrawn from consideration as being directed to a non-elected invention. See 37 CFR 1.142(b) and MPEP § 821.03.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1,20-27 and 28, drawn to sensing items at a brick and mortar store and later recalling the list to make purchases on line, classified in class 705, subclass 26.

- II. Claims 3-6, drawn to using list in an online store and having items recommended from the recall list, classified in class 705, subclass 26.
- III. Claim 7, drawn to logging habits and preferences and using them in a brick and mortar store, classified in class 705, subclass 26.
- IV. Claims 9-19, drawn to the use of an on line virtual shopping aisle, classified in class 705, subclass 26.

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination II has separate utility such as using list in an online store and having items recommended from the recall list. See MPEP § 806.05(d).

The examiner has required restriction between subcombinations usable together. Where applicant elects a subcombination and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art due to their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Inventions I and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination III has separate utility such as to logging habits and preferences and using them in a brick and mortar store. See MPEP § 806.05(d).

The examiner has required restriction between subcombinations usable together.
